SUMMARY

Front-end Developer with 3 years of experience developing high-performance, responsive, and user-focused web applications using React.js, JavaScript, TypeScript, and modern frontend technologies. Skilled in scalable UI architecture, Micro Frontend development, reusable component design, state management with Redux Toolkit and Context API, and performance optimization. Proficient in AI-assisted development using GitHub Copilot to accelerate development and improve code quality. Adept at delivering production-ready code, integrating seamlessly with backend services, RESTful APIs, and PostgreSQL databases, while staying current with emerging frontend technologies.

TECHNICAL SKILLS

- **Frontend:** React.js, JavaScript, TypeScript, HTML5, CSS3, SCSS, Tailwind CSS, HOC, lazy loading, debouncing, responsive design
- **Backend:** Node.js, Express.js, REST APIs, JWT auth, bcrypt, SendMail (mailer)
- **Database:** PostgreSQL, SQL, SSMS
- **AI & Automation:** Prompt engineering, AI-assisted code generation, workflow optimization with AI tools (ChatGPT, GitHub Copilot)
- **State Management:** Redux, Redux Toolkit, RTK Query, Context API
- **Tools & DevOps:** Git, GitHub, Yarn, Webpack, Vite, Postman, YAML
- **Web APIs:** localStorage, sessionStorage, Fetch API
- **Other:** Firebase (Auth), API Integration, Photoshop

WORK EXPERIENCE

IBM - Software Developer

OCT 2025 - Present

- Developed and maintained scalable React.js and TypeScript applications for **AT&T mBiz** and **mFAST**, building responsive and reusable user interfaces using Ant Design (AntD), Tailwind CSS, and SASS for agreement management, FAN profile, and account management workflows.
- Developed and enhanced features within a Micro Frontend application by integrating RESTful APIs, building reusable React components, Higher-Order Components (HOCs), and Custom Hooks to improve code reusability and maintainability.
- Optimized application performance using lazy loading, code splitting, debouncing, and React rendering optimizations to deliver a faster and more responsive user experience.
- Implemented persona-based access control using GetUserPersona data from backend services to dynamically render application features, navigation, and UI components based on user roles and permissions.
- Participated in production release activities by preparing and reviewing **Runbooks**, including Production, Disaster Recovery (DR), and Backout deployment plans, ensuring smooth deployments in collaboration with release and production support teams.
- Leveraged GitHub **Copilot** to accelerate feature development, improve code quality, and enhance developer productivity while collaborating through Git/GitHub and following React best practices to deliver clean, maintainable, and production-ready code.

Signant Health - Associate Operations Software Engineer

MAR 2023 - FEB 2025

- Developed and maintained React.js and TypeScript applications for clinical trial platforms, contributing to EDC, eSource, and ePRO modules by building responsive UI components and integrating RESTful APIs.
- Developed and configured EDC Encoder features for new clinical studies, enhanced eSource user management workflows, and built UI components for ePRO questionnaires and patient data collection.
- Improved application performance using lazy loading, debouncing, reusable Higher-Order Components (HOCs), Custom Hooks, Context API, and Redux, while writing clean, maintainable, and production-ready React code.

PROJECTS

TradePlan – Trading Strategy & Behavioral Analysis Platform

- Developed responsive user interfaces for the landing page, authentication flow, strategy builder, strategy list, analysis dashboard, and trade discipline modules using React.js, Ant Design (AntD), and Tailwind CSS.
- Built features for creating and managing trading strategies, allowing users to define custom trading logic, maintain strategy descriptions, monitor trading behavior, and analyze trading performance by integrating RESTful APIs and implementing protected routes.
- Improved application performance and maintainability by implementing Redux Toolkit, Custom Hooks, Higher-Order Components (HOCs), lazy loading, debouncing, and reusable React components.
- Implemented secure authentication with email and PIN-based login, developed reusable UI components and utilities, and delivered a scalable, production-ready frontend following React best practices.

MultiClient Auth Suite - Git Code link

- Built a multi-tenant authentication system (Authentication) with email-based PIN verification and secure token based access.
- Implemented Context API for global authentication state, role-based routing (users), and protected routes for secure navigation.
- Optimized performance and reusability using HOCs, custom hooks (useAuthForm), controlled inputs, and utility modules for validation and API handling.
- Integrated toast notifications for real-time user feedback and a password strength meter for better UX; structured backend using modular routes, controllers, and models.

Authify - Live Demo link

- Built Authify, a authentication app using React, Node.js, Express.js, PostgreSQL, TypeScript, Tailwind CSS, Firebase.
- Implemented JWT authentication, bcrypt password hashing, and role-based access control.
- Optimized performance by implementing lazy loading for non-critical pages using a custom HOC with React Suspense.
- Added a show/hide password toggle and a real-time password strength meter (Weak, Good, Strong), with dynamic suggestions based on password rules (1 uppercase, 1 number, 1 special character, min 8 characters).

Weather Forecasting App - Live Demo link

- Developed a weather forecasting app using React and Redux Toolkit Query, integrating the OpenWeather Map API for real-time weather data with efficient API caching and state management.
- Created reusable custom hooks and utility functions for unit conversions (e.g., Kelvin to Celsius, Unix to local time).
- Optimized performance with lazy loading of components and implemented a theme toggle (light/dark mode) with localStorage, ensuring a smooth, responsive UI across devices using SCSS mixins and media queries.

Influx - Live Demo link

- Developed and optimized the brand dashboard, influencer profile, and landing page for Social Influx.
- Built a responsive UI using React.js, SCSS, and CSS variables for a seamless user experience.

EDUCATION

Bachelor of Computer Science Engineering

Sri Krishna Institute Of Technology - Bangalore - 2022
